

RFU – SF₆ refill unit

REDRAGON

The Redragon RFU is a portable handcart, with optional storage cylinder, designed to refill small sulphur hexafluoride switchgear and breakers. It operates using a single 3-way valve allow easy switching between evacuation mode and filling mode.

Evacuation mode is available with the optional vacuum pump. Dual cylinder tie-downs are also available.

It has an optional 6 CFM vacuum pump (10 CFM is available) capable of producing a blank-off vacuum of less than 20 microns or 0.02 Torr.
